SUMMARY

Group Leader of the CENTUM VP Group at Yokogawa Engineering Asia's Singapore Development Centre, accountable for product development and maintenance across multiple subsystems — Graphic, Batch, UACS, UGS, Trend, Exaopc UA and CI Server. Scope spans architecture direction, requirements and design governance, delivery planning, and the coordination of engineering teams in Singapore, Japan, Vietnam and India. Focus areas: software architecture, structured technical decision analysis, multi-site delivery governance, secure development practice and engineering capability development.

EXPERIENCE

● DECEMBER 2009 — PRESENT

Group Leader, Senior Executive Engineer

Yokogawa SINGAPORE

Joined to develop CENTUM VP, the company's distributed control system; progressed through team leader and architect appointments to group leadership.

- Accountable for product development and maintenance across multiple CENTUM VP subsystems, directing local engineering staff, subcontractors and offshore development partners.
- Engineered an alarm interface that renders ten thousand messages per second.
- Delivered a .NET framework migration with full compatibility across earlier product revisions and all supported operating systems.
- Built the framework APIs underpinning Automation Design Organizer, adopted across four development centres.
- Led the feasibility study for modernising a legacy OPC product to 64-bit: a two-process architecture, with four inter-process communication approaches evaluated against performance, maintainability and implementation effort.
- Owns delivery planning — schedule creation and revision, reverse-planning from fixed milestones, dependency and buffer management, and progress reporting across sites.
- Governs product quality through specification ownership, design, code and test case review, integration test classification and build gate definition.
- Proposed a revised maintenance operating model for a mature subsystem, addressing continuity and accumulated-context losses from short engineer rotations.
- Establishing secure development practice across the group in advance of EU Cyber Resilience Act requirements.
- Develops organisational capability through training plans, environment setup documentation, structured onboarding and technical deep-dive material.

HIGHLIGHTS

10,000

alarm messages rendered per second

4

development centres on the Automation Design Organizer framework

64-bit

two-process modernisation of a legacy OPC product

EDUCATION

Bachelor of Computer Science

Digital Systems Security · University of Wollongong · 2008 — 2009

Diploma in Information Technology

Software Engineering · Ngee Ann Polytechnic · 2000 — 2003

CERTIFICATIONS

Certified ScrumMaster (CSM)

EU Cyber Resilience Act programme

The Linux Foundation · 2026

TOP SKILLS

Product requirements

Code review

SOLID design principles

LANGUAGES

English

Native or bilingual

Chinese

Native or bilingual

JULY — DECEMBER 2009

Software Engineer

Agathos Solutions Pte Ltd SINGAPORE

Web-based customer self-help software (iSupport): technical investigation and a survey of existing market solutions; requirements gathering, prototyping and design.

MAY 2006 — NOVEMBER 2008

Software Engineer

OpenIntegration Pte Ltd SINGAPORE

Equipment connectivity, integration, simulation and SEMI standards compliance testing for the semiconductor industry.

- Studied the EDA SEMI standards and applied them across OpenEDA Simulator, OpenFabSim_300 and OpenAST.
- Designed and implemented sub-modules, prototyped, tested, resolved defects and maintained released versions.
- Handled requirements gathering, stakeholder review and support for issues arising from the field.

DECEMBER 2005 — MAY 2006

Software Engineer

Panamedia Pte Ltd SINGAPORE

Web solutions, marketing and advertising: analysed customer requirements and proposed durable approaches; researched CMS platforms and frameworks to improve delivery speed; supported sales on graphic direction and rebuilt the company website to assist lead generation.
